Professional Summary

Results-oriented Data Analytics trainee with hands-on experience in data extraction, cleaning, analysis, and visualization using Python, SQL, PostgreSQL, Power BI, Streamlit, and Pandas. Skilled in building end-to-end analytics workflows, interactive dashboards, KPI reports, and data-driven business insights. Developed real-world analytics projects involving multi-dataset analysis, dashboard automation, and dynamic reporting systems. Completed practical project-based training focused on data preprocessing, exploratory data analysis, business intelligence, and analytical problem-solving. Seeking a Data Analysis / Data Analytics internship to contribute to data-driven decision-making and business insights.

Technical Skill

Programming: Python, SQL
Libraries: Pandas, NumPy, Streamlit, SQLAlchemy, Plotly, Matplotlib, Seaborn
Databases: MySQL, PostgreSQL
BI & Visualization: Power BI (interactive dashboards, KPI analysis), MS-Excel (Pivot Tables, Charts, Dashboards, Slicers,Timelines)
Data Analysis: Data Cleaning, Data Preprocessing, EDA, Trend Analysis, KPI Analysis, Root Cause Analysis, Correlation Analysis, Outlier Detection, Behavioral Analysis, Market Sentiment Analysis, Statistical Analysis
Other Tools: Jupyter Notebook, Git, GitHub

Experience

Data Operations & Analytics Intern May 2026 – June 2026

Jobyaari | Remote

- Conducted market research by extracting, structuring, and standardizing data from 35+ government sector job notification PDFs using MS-Excel, creating a dataset of 500+ job opportunities.
- Performed data cleaning, validation, categorization, and qualification mapping on unstructured datasets to improve data quality, consistency, and searchability.
- Prepared backend-ready structured datasets for job publishing pipelines while maintaining high accuracy and consistency standards across records.
- Collaborated on data operations and workflow optimization tasks, ensuring reliable dataset organization and efficient information management.

Projects

Data Analytics Platform Python | Streamlit | PostgreSQL | Pandas | Plotly | SQLAlchemy

- Developed a full-stack analytics platform enabling users to upload, clean, connect, and analyze multiple datasets through a unified web interface.
- Built a dynamic relationship engine with automated SQL JOIN generation, allowing cross-dataset analysis without manual query writing.
- Engineered an analytics system supporting 5 SQL aggregations (SUM, AVG, COUNT, MAX, MIN) and interactive dashboard creation with 4 visualization types.
- Integrated PostgreSQL (Supabase), automated data quality reporting, and satistical insights to support scalable and data-driven decision-making.

Live Demo: https://dataset-insight-platform.streamlit.app/

Blinkit Sales Performance Analysis Python | EDA| Power BI| Data Visualization

- Analyzed 8,523 grocery products and $1.20M in total sales data to identify key revenue drivers, customer preferences, and outlet performance trends.
- Performed end-to-end data cleaning, preprocessing, and exploratory data analysis using Python, Pandas, and NumPy to improve data quality and analytical accuracy.
- Built an interactive Power BI dashboard tracking key business KPIs including Total Sales ($1.20M), Average Order Value ($140.99), Total Items (8,523), and Average Rating (3.97).
- Generated actionable business insights revealing that Fruits & Vegetables, Snack Foods, Medium-sized outlets, and Tier 2/3 cities were major contributors to overall sales performance.

Trader Performance vs Market Sentiment Analysis Python | Pandas | EDA | Behavioral Analytics | Data Visualization

- Cleaned, transformed, and integrated Bitcoin market sentiment and trader activity datasets by aligning trade-level and daily sentiment data for analysis.
- Engineered key performance metrics including PnL, win rate, average trade size, trade frequency, and long-position ratio to evaluate trader behavior and risk exposure.
- Conducted behavioral segmentation and sentiment-based analysis across 5 market conditions (Fear, Greed, Neutral, Extreme Fear, and Extreme Greed) to identify profitability patterns.
- Discovered that consistent traders (win rate > 60%) and high-frequency traders outperformed across varying market conditions, while trader performance peaked during Fear-driven market phases.

Road Accident Casualty Analysis MS-Excel| Data Cleaning| Dashboarding

- Analyzed 235,288 road accident casualties and developed an interactive Excel dashboard to monitor severity, vehicle, road, and location-based accident trends.
- Designed KPI-driven reporting covering Fatal (3,492), Serious (32,223), and Slight (199,573) casualties, enabling comprehensive accident severity analysis.
- Built interactive visualizations using Pivot Tables, Charts, Slicers, and Timelines to analyze casualty patterns across road types, vehicle categories, surface conditions, and urban/rural regions.
- Identified key safety insights, including cars contributing nearly 80% of total casualties and single carriageways accounting for the highest accident impact, supporting data-driven road safety recommendations.

Education

2025 – 2028

Bachelor of Computer Applications (BCA) – Pursuing

Manipal University Jaipur (Online & Distance Mode)
2025 – 2028

Advanced Diploma in Digital Computer Application (A.D.D.C.A.)

IST-C.E.C. Private Limited | 2023

Training

Sep 2025 – Dec 2025

Data Analytics Trainee

YBI Foundation | Remote

- Completed end-to-end training on Python, Pandas, NumPy, and foundational ML concepts, working on 5+ real-world datasets to generate actionable business insights.
- Executed data extraction, cleaning, preprocessing, and interpretation workflows across multiple datasets, reducing data incon- sistencies and improving analysis accuracy by standardizing pipelines.
- Built and submitted independent mini-projects focused on business problem-solving, earning certification based on project performance and demonstrating practical data analysis competency.

CERTIFICATIONS

- Data Science and Machine Learning Internship Program – **YBI Foundation**
- Pandas for Data Analysis – **Kaggle**
- Python Programming – **Kaggle**
- 3D & 2D Data Visualization with Python – **YBI Foundation**
